- (c) Right storage is recommended for no food wastage. ()
- (d) Leftover food should not be reused. ()

6. Read and mark (✓) for correct or (×) for incorrect: 2 x 6 = 12

Heatstroke is a condition caused by the body overheating. This usually happens because of exposure to high temperatures or physical activity in high temperatures for too long. Preventing heat stroke comes down to regulating your body temperature and staying well-hydrated. The most actionable steps include drinking 3–4 litres of fluids daily, avoiding the hot sun during peak hours, wearing light and breathable clothing, and taking shaded breaks if working outdoors. Keep a close eye on babies, the elderly, and pregnant women, as they overheat much faster.

- a) Exposure to high temperature for long can cause heat stroke. (✓)**
- b) Staying well-hydrated does not help with heat stroke. ()
- c) 3-4 litres of fluid intake daily is necessary to prevent heat stroke. ()
- d) Hot sun must be avoided during peak hours. ()
- e) Babies and elderly do not get heat stroke. ()
- f) Pregnant women do not overheat faster than others. ()
- g) Shaded breaks are necessary while working outdoors. ()
